MCQ (Single Correct Answer) 177 questions

Q1. RE-NEET 2026

Match List-I with List-II.

	List-I		List-II
A.	Fusion of protoplasms between gametes	I.	Meiosis
B.	Fusion of two nuclei	II.	Plasmogamy
C.	Generation of haploid spores	III.	Karyogamy

Open solution

Choose the correct answer from the options given below :

(A) A-I, B-III, C-II (B) A-II, B-III, C-I (C) A-II, B-I, C-III (D) A-III, B-II, C-I

Q2. RE-NEET 2026

Mad cow disease is caused by ____

(A) Mycoplasma sp. (B) prions (C) viroids (D) Aspergillus sp.

Open solution

Q3. RE-NEET 2026

Match List-I with List-II.

	List-I		List-II
A.	Spherical	I.	Vibrio
B.	Rod	II.	Cocci
C.	Comma	III.	Spirilla
D.	Spirillum	IV.	Bacilli

Open solution

Choose the correct answer from the options given below :

(A) A-II, B-IV, C-I, D-III (B) A-I, B-III, C-II, D-IV

(C) A-III, B-II, C-I, D-IV (D) A-II, B-I, C-IV, D-III

Q4. RE-NEET 2026

Symbiotic associations between fungi and algae are called ____ .

(A) chrysophytes (B) lichens (C) sponges (D) mycorrhiza

Open solution

Q5. RE-NEET 2026

Which of the following is not a prokaryote?

(A) Fungi (B) Bacteria (C) Blue green algae (D) Mycoplasma

Open solution

Keep practising on the ExamGOAL app
Chapter-wise PYQs with solutions, full mock tests and analysis for JEE, NEET, GATE and more.
GET IT ON Google Play

Q6. NEET 2026

The main criteria used for Five Kingdom Classification proposed by R.H. Whittaker (1969) included :

A. Cell structure

B. Body organization

C. Presence of flagellum

D. Reproduction

E. Phylogenetic relationships

Choose the correct answer from the options given below :

(A) A, B, C, D and E

(B) B, C and D only

(C) A, B, D and E only

(D) A, B and E only

Open solution

Q7. NEET 2025

Each of the following characteristics represent a Kingdom proposed by Whittaker. Arrange the following in increasing order of complexity of body organization.

A. Multicellular heterotrophs with cell wall made of chitin.

B. Heterotrophs with tissue/organ/organ system level of body organization.

C. Prokaryotes with cell wall made of polysaccharides and amino acids.

D. Eukaryotic autotrophs with tissue/organ level of body organization.

E. Eukaryotes with cellular body organization.

Choose the correct answer from the options given below :

(A) A, C, E, D, B **(B)** C, E, A, B, D **(C)** A, C, E, B, D **(D)** C, E, A, D, B

Open solution

Q8. NEET 2024 (Re-Examination)

Match List-I with List-II:

	List - I Organisms		**List - II Mode of Nutrition**
(A)	Euglenoid	(I)	Parasitic
(B)	Dinoflagellate	(II)	Saprophytic
(C)	Slime mould	(III)	Photosynthetic
(D)	Plasmodium	(IV)	Switching between photosynthetic and heterotrophic mode

Choose the correct answer from the options given below:

(A) A-III, B-IV, C-II, D-I

(B) A-IV, B-II, C-I, D-III

(C) A-IV, B-III, C-II, D-I

(D) A-IV, B-II, C-III, D-I

Open solution

Keep practising on the ExamGOAL app
Chapter-wise PYQs with solutions, full mock tests and analysis for JEE, NEET, GATE and more.
GET IT ON Google Play

Q9. NEET 2024

Match List I with List II

	List - I		List - II
A.	Rhizopus	I.	Mushroom
B.	Ustilago	II.	Smut fungus
C.	Puccinia	III.	Bread mould
D.	Agaricus	IV.	Rust fungus

Choose the correct answer from the options given below:

(A) A-III, B-II, C-IV, D-I
(B) A-I, B-III, C-II, D-IV
(C) A-III, B-II, C-I, D-IV
(D) A-IV, B-III, C-II, D-I

Open solution

Q10. NEET 2024

Which one of the following is not a criterion for classification of fungi?

(A) Morphology of mycelium
(B) Mode of nutrition
(C) Mode of spore formation
(D) Fruiting body

Open solution

Q11. NEET 2023 Manipur

House fly belongs to _____ family.

(A) Cyprinidae
(B) Hominidae
(C) Calliphoridae
(D) Muscidae

Open solution

Q12. NEET 2023 Manipur

'X' and 'Y' are the components of Binomial nomenclature. This naming system was proposed by 'Z' :

(A) X-Generic name, Y-Specific epithet, Z-Carolus Linnaeus
(B) X-Specific epithet, Y-Generic name, Z-R.H. Whittaker
(C) X-Specific epithet, Y-Generic name, Z-Carolus Linnaeus
(D) X-Generic name, Y-Specific epithet, Z-R.H. Whittaker

Open solution

Q13. NEET 2022 Phase 2

Mad cow disease in cattle and Cr Jacob disease in humans are due to infection by _____.

(A) Prion
(B) Bacterium
(C) Virus
(D) Viroid

Open solution

Keep practising on the ExamGOAL app
Chapter-wise PYQs with solutions, full mock tests and analysis for JEE, NEET, GATE and more.

Q14. NEET 2022 Phase 1

Open solution

Given below are two statements:

Statement I : Mycoplasma can pass through less than 1 micron filter size.

Statement II : Mycoplasma are bacteria with cell wall.

In the light of the above statements, choose the most appropriate answer from the options given below :

(A) Both Statement I and Statement II are correct

(B) Both Statement I and Statement II are incorrect

(C) Statement I is correct but Statement II is incorrect

(D) Statement I is incorrect but Statement II is correct

Q15. NEET 2022 Phase 1

Open solution

Which of the following is a correct statement?

(A) Cyanobacteria are a group of autotrophic organisms classified under Kingdom Monera

(B) Bacteria are exclusively heterotrophic organisms

(C) Slime moulds are saprophytic organisms classified under Kingdom Monera.

(D) Mycoplasma have DNA, ribosome and cell wall.

Q16. NEET 2021

Open solution

Which of the following statements is correct?

(A) Some of the organisms can fix atmospheric nitrogen in specialized cells called sheath cells

(B) Fusion of two cells is called Karyogamy

(C) Fusion of protoplasm between two motile or non-motile gametes is called plasmogamy

(D) Organisms that depend on living plants are called saprophytes

Q17. NEET 2020 Phase 2

Open solution

Which of the following is **incorrect** about Cynobacteria ?

(A) They have chlorophyll A similar to green plants

(B) They are photoautotrophs

(C) They lack heterocysts

(D) They often form blooms in polluted water bodies

Q18. NEET 2020 Phase 1

Open solution

Which of the following is correct about viroids?

(A) They have free RNA without protein coat

(B) They have DNA with protein coat

(C) They have free DNA without protein coat

(D) They have RNA with protein coat

Keep practising on the ExamGOAL app

Q19. NEET 2019 (Odisha)

Mad cow disease in cattle is caused by an organism which has :

(A) Free DNA without protein coat
(B) Inert crystalline structure
(C) Abnormally folded protein
(D) Free RNA without protein coat

Open solution

Q20. NEET 2019 (Odisha)

Which of the following statements is correct?

(A) Lichens are not good pollution indicators.
(B) Lichens do not grow in polluted areas.
(C) Algal component of lichens is called mycobiont
(D) Fungal component of lichens is called phycobiont.

Open solution

Q21. NEET 2019 (Odisha)

Match the organisms in column I with habitats in column II.

Column-I	Column-II
(a) Halophiles	(i) Hot springs
(b) Thermoacidophiles	(ii) Aquatic environment
(c) Methanogens	(iii) Guts of ruminants
(d) Cyanobacteria	(iv) Salty areas

Select the correct answer from the options given below :

(A) (a)-(ii), (b)-(iv), (c)-(iii), (d)-(i)
(B) (a)-(iv), (b)-(i), (c)-(iii), (d)-(ii)
(C) (a)-(i), (b)-(ii), (c)-(iii), (d)-(iv)
(D) (a)-(iii), (b)-(iv), (c)-(ii), (d)-(i)

Open solution

Q22. NEET 2019

Which of the following statements is **incorrect**?

(A) Infective constituent in viruses is the protein coat
(B) Prions consist of abnormally folded proteins
(C) Viroids lack a protein coat
(D) Viruses are obligate parasites

Open solution

Keep practising on the ExamGOAL app

Q23. NEET 2019

Which of the following statement is **incorrect**?

(A) Conidia are produced exogenously and ascospores endogenously.

(B) Yeasts have filamentous bodies with long thread-like hyphae.

(C) Morels and truffles are edible delicacies.

(D) Claviceps is a source of many alkaloids and LSD.

Open solution

Q24. NEET 2018

Which among the following is not a prokaryote?

(A) Mycobacterium (B) Saccharomyces (C) Oscillatoria (D) Nostoc

Open solution

Q25. NEET 2018

Select the wrong statement.

(A) Mushrooms belong to basidiomycetes.

(B) Cell wall is present in members of fungi and plantae.

(C) Pseudopodia are locomotory and feeding structures in sporozoans.

(D) Mitochondria are the powerhouse of the cell in all kingdoms except monera.

Open solution

Q26. NEET 2018

After karyogamy followed by meiosis, spores are produced exogenously in

(A) Saccharomyces. (B) Neurospora (C) Alternaria (D) Agaricus

Open solution

Q27. NEET 2018

Oxygen is not produced during photosynthesis by

(A) Cycas (B) Green sulphur bacteria

(C) Chara (D) Nostoc

Open solution

Q28. NEET 2018

Which of the following organisms are known as chief producers in the oceans?

(A) Euglenoids (B) Cyanobacteria (C) Dinoflagellates (D) Diatoms

Open solution

Keep practising on the ExamGOAL app
Chapter-wise PYQs with solutions, full mock tests and analysis for JEE, NEET, GATE and more.
GET IT ON Google Play

Q29. NEET 2018

Ciliates differ from all other protozoans in

(A) having a contractile vacuole for removing excess water

(B) having two types of nuclei.

(C) using flagella for locomotion

(D) using pseudopodia for capturing prey

Open solution

Q30. NEET 2017

Which of the following are found in extreme saline conditions?

(A) Eubacteria (B) Cyanobacteria (C) Mycobacteria (D) Archaebacteria

Open solution

Q31. NEET 2017

Viroids differ from viruses in having

(A) DNA molecules without protein coat (B) RNA molecules with protein coat

(C) RNA molecules without protein coat (D) DNA molecules with protein coat

Open solution

Q32. NEET 2017

Which among the following are the smallest living cells, known without a definite cell wall, pathogenic to plants as well as animals and can survive without oxygen?

(A) *Pseudomonas* (B) Mycoplasma (C) *Nostoc* (D) *Bacillus*

Open solution

Q33. NEET 2017

Which of the following components provides sticky character to the bacterial cell?

(A) Nuclear membrane (B) Plasma membrane

(C) Glycocalyx (D) Cell wall

Open solution

Q34. NEET 2017

DNA replication in bacteria occurs

(A) within nucleolus (B) prior to fission

(C) just before transcription (D) during S phase

Open solution

Q35. NEET 2016 Phase 2

Which one of the following is wrong for fungi?

(A) They are eukaryotic.

(B) All fungi possess a purely cellulosic cell wall.

(C) They are heterotrophic.

(D) They are both unicellular and multicellular.

Open solution

Q36. NEET 2016 Phase 2

Methanogens belong to

(A) eubacteria (B) archaebacteria (C) dinoflagellates (D) slime moulds.

Open solution

Q37. NEET 2016 Phase 2

Select the wrong statement.

(A) The walls of diatoms are easily destructible.

(B) 'Diatomaceous earth's is formed by the cell walls of diatoms.

(C) Diatoms are cheif producers in the oceans.

(D) Diatoms are microscopic and float passively in water.

Open solution

Q38. NEET 2016 Phase 1

The primitive prokaryotes responsible for the production of biogas from the dung of ruminant animals, include the

(A) methanogens (B) eubacteria

(C) halophiles (D) thermoacidophiles.

Open solution

Q39. NEET 2016 Phase 1

Which one of the following statements is wrong?

(A) Eubacteria are also called false bacteria.

(B) Phycomycetes are also called algal fungi.

(C) Cyanobacteria are also called blue-green algae.

(D) Golden algae are also called desmids.

Open solution

Q40. NEET 2016 Phase 1

Which of the following statements is wrong for viroids?

(A) They cause infections. (B) Their RNA is of high molecular weight.

(C) They lack a protein coat. (D) They are smaller than viruses.

Open solution

Keep practising on the ExamGOAL app
Chapter-wise PYQs with solutions, full mock tests and analysis for JEE, NEET, GATE and more.
GET IT ON Google Play

Q41. NEET 2016 Phase 1

One of the major components of cell wall of most fungi is

(A) cellulose (B) hemicellulose (C) chitin (D) peptidoglycan.

Open solution

Q42. NEET 2016 Phase 1

Chrysophytes, Euglenoids, Dinoflagellates and Slime moulds are included in the Kingdom

(A) Fungi (B) Animalia (C) Monera (D) Protista.

Open solution

Q43. AIPMT 2015

The structures that help some bacteria to attach to rocks and/or host tissues are

(A) mesosomes (B) holdfast (C) rhizoids (D) fimbriae.

Open solution

Q44. AIPMT 2015

Select the wrong statement.

(A) The term *'contagium vivum fluidum'* was coined by M. W. Beijerinck.

(B) Mosaic disease in tobaco and AIDS in human being are caused by viruses.

(C) The viroids were discovered by D.J. Ivanowsky.

(D) W.M. Stanley showed that viruses could be crystallised.

Open solution

Q45. AIPMT 2015

In which group of organisms the cell walls form two thin overlapping shells which fit together?

(A) Dinoflagellates (B) Slime moulds (C) Chrysophytes (D) Euglenoids

Open solution

Q46. AIPMT 2015

Pick up the wrong statement.

(A) Some fungi are edible.

(B) Nuclear membrane is present in Monera.

(C) Cell wall is absent in Animalia.

(D) Protists have photosynthetic and heterotrophic modes of nutrition.

Open solution

Chapter-wise PYQs with solutions, full mock tests and analysis for JEE, NEET, GATE and more.
GET IT ON Google Play

Q47. AIPMT 2015

Choose the wrong statement.

(A) Morels and truffles are poisonous mushrooms.

(B) Yeast is unicellular and useful in fermentation.

(C) *Penicillium* is multicellular and produces antibiotics.

(D) *Neurospora* is used in the study of bio-chemical genetics.

Open solution

Q48. AIPMT 2015

Cell wall is absent in

(A) Mycoplasma (B) *Nostoc* (C) *Aspergillus* (D) *Funaria.*

Open solution

Q49. AIPMT 2015

The imperfect fungi which are decomposers of litter and help in mineral cycling belong to

(A) Ascomycetes (B) Phycomycetes (C) Basidiomycetes (D) Deuteromycetes

Open solution

Q50. AIPMT 2015 Cancelled Paper

True nucleus is absent in

(A) *Vaucheria* (B) *Volvox* (C) *Anabaena* (D) *Mucor.*

Open solution

Q51. AIPMT 2015 Cancelled Paper

Which one of the following matches is correct?

(A)

Mucor	**Reproduction by conjugation**	**Ascomycetes**

(B)

Agaricus	**Parasitic fungus**	**Basidiomycetes**

(C)

Phytophthora	**Aseptate mycelium**	**Basidiomycetes**

(D)

Alternaria	**Sexual reproduction absent**	**Deuteromycetes**

Open solution

Q52. AIPMT 2014

Five kingdom system of classification suggested by R.H. Whittaker is not based on

(A) presence or absence of a well defined nucleus

(B) mode of reproduction

(C) mode of nutrition

(D) complexity of body organisation.

Open solution

Keep practising on the ExamGOAL app

Q53. AIPMT 2014

Which of the following shows coiled RNA strand and capsomeres?

(A) Polio virus
(B) Tobaco mosaic virus
(C) Measles virus
(D) Retrovirus

Open solution

Q54. AIPMT 2014

Viruses have

(A) DNA enclosed in a protein coat
(B) prokaryotic nucleus
(C) single chromosome
(D) both DNA and RNA.

Open solution

Q55. AIPMT 2014

Archaebacteria differ from eubacteria in

(A) cell membrane structure
(B) mode of nutrition
(C) cell shape
(D) mode of reproduction.

Open solution

Q56. AIPMT 2014

Which structures perform the function of mitochondria in bacteria?

(A) Nucleoid (B) Ribosomes (C) Cell wall (D) Mesosomes

Open solution

Q57. AIPMT 2014

The motile bacteria are able to move by

(A) fimbriae (B) flagella (C) cilia (D) pili.

Open solution

Q58. AIPMT 2014

Anoxygenic photosynthesis is characteristic of

(A) *Rhodospirillum* (B) *Spirogyra* (C) *Chlamydomonas* (D) *Ulva.*

Open solution

Q59. NEET 2013 (Karnataka)

Why is a capsule advantageous to a bacterium?

(A) It protects the bacterium from desiccation.
(B) It provides means of locomotion
(C) It allows bacterium to "hide" from host's immune system.
(D) It allows the bacterium to attach to the surface.

Open solution

Keep practising on the ExamGOAL app

Q60. NEET 2013 (Karnataka)

Which one of the following is true for fungi?

(A) They lack a rigid cell wall.
(B) They are heterotrophs.
(C) They lack nuclear membrane.
(D) They are phagotrophs.

Open solution

Q61. NEET 2013

Which of the following are likely to be present in deep sea water?

(A) Blue-green algae
(B) Saprophytic fungi
(C) Archaebacteria
(D) Eubacteria

Open solution

Q62. NEET 2013

Pigment containing membranous extensions in some cyanobacteria are

(A) pneumatophores (B) chromatophores (C) heterocysts (D) basal bodies.

Open solution

Q63. AIPMT 2012 Mains

In the five kingdom classification, *Chlamydomonas* and *Chlorella* have been included in

(A) protista (B) algae (C) plantae (D) monera.

Open solution

Q64. AIPMT 2012 Prelims

Which statement is wrong for viruses?

(A) All are parasites.
(B) All of them have helical symmetry
(C) They have ability to synthesize nucleic acids and proteins.
(D) Antibiotics have no effect on them.

Open solution

Q65. AIPMT 2012 Prelims

Maximum nutritional diversity is found in the group

(A) fungi (B) animalia (C) monera (D) plantae.

Open solution

Q66. AIPMT 2012 Prelims

Nuclear membrane is absent in

(A) *Penicillium* (B) *Agaricus* (C) *Volvox* (D) *Nostoc.*

Open solution

Keep practising on the ExamGOAL app
Chapter-wise PYQs with solutions, full mock tests and analysis for JEE, NEET, GATE and more.
GET IT ON Google Play

Q67. AIPMT 2012 Prelims

The cyanobacteria are also referred to as

(A) protists
(B) golden algae
(C) slime moulds
(D) blue green algae.

Open solution

Q68. AIPMT 2012 Prelims

The most abundant prokaryotes helpful to humans in making curd from milk and in production of antibiotics are the ones categorised as

(A) cyanobacteria
(B) archaebacteria
(C) chemosynthetic autotrophs
(D) heterotrophic bacteria.

Open solution

Q69. AIPMT 2012 Prelims

Which one single organism or the pair of organisms is correctly assigned to its or their named taxonomic group?

(A) *Paramecium* and *Plasmodium* belong to the same kingdom as that of *Penicillium*.
(B) Lichen is a composite organism formed from the symbiotic association of an algae and a protozoan.
(C) Yeast used in making bread and beer is a fungus.
(D) *Nostoc* and *Anabaena* are examples of protista.

Open solution

Q70. AIPMT 2012 Prelims

Which one of the following microbes forms symbiotic association with plants and helps them in their nutrition?

(A) *Azotobacter*
(B) *Aspergillus*
(C) *Glomus*
(D) *Trichoderma*

Open solution

Q71. AIPMT 2011 Mains

The pathogen *Microsporum* responsible for ringworm disease in humans belongs to the same kingdom of organisms as that of

(A) *Taenia,* a tapeworm
(B) *Wuchereria,* a filarial worm
(C) *Rhizopus,* a mould
(D) *Ascaris,* a round worm.

Open solution

Q72. AIPMT 2011 Prelims

Which one of the following also acts as a catalyst in a bacterial cell?

(A) 5S *r*RNA
(B) snRNA
(C) hnRNA
(D) 23S *r*RNA

Open solution

Q73. AIPMT 2011 Prelims

In eubacteria, a cellular component that resembles eukaryotic cell is

(A) plasma membrane
(B) nucleus
(C) ribosomes
(D) cell wall.

Open solution

Q74. AIPMT 2011 Prelims

Which one of the following organisms is not an eukaryotic cells?

(A) *Paramecium caudatum*
(B) *Escherichia coli*
(C) *Euglena viridis*
(D) *Amoeba proteus*

Open solution

Q75. AIPMT 2011 Prelims

Which one of the following is incorrectly matched?

(A) Root pressure-guttation
(B) *Puccinia-smut*
(C) Root-exarch protoxylem
(D) *Cassia*-imbricate aestivation

Open solution

Q76. AIPMT 2010 Mains

Select the correct combination of the statements (i-iv) regarding the characteristics of certain organisms.
(i) Methanogens are archaebacteria which produce methane in marshy areas.
(ii) *Nostoc* is a filamentous blue-green alga which fixes atmospheric nitrogen.
(iii) Chemosynthetic autotrophic bacteria synthesize cellulose from glucose.
(iv) Mycoplasma lack a cell wall and can survive without oxygen.
The correct statements are

(A) (ii) and (iii)
(B) (i), (ii) and (iii)
(C) (ii), (iii) and (iv)
(D) (i), (ii) and (iv).

Open solution

Q77. AIPMT 2010 Mains

Black (stem) rust of wheat is caused by

(A) *Alternaria solani*
(B) *Ustilago nuda*
(C) *Puccinia graminis*
(D) *Xanthomonas oryzae.*

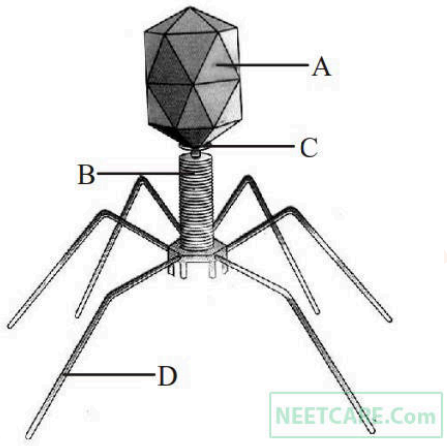

Open solution

Q78. AIPMT 2010 Mains

Given below is the diagram of a bacteriophage. In which one of the options all the four parts A, B, C and D are correct?

Open solution

(A) A → Collar, B → Tail fibres, C → Head, D → Sheath
(B) A → Tail fibres, B → Head, C → Sheath, D → Collar
(C) A → Head , B → Sheath, C → Collar, D → Tail fibres
(D) A → Sheath, B → Collar, C → Head, D → Tail fibres

Q79. AIPMT 2010 Prelims

Virus envelope is known as

(A) capsid (B) virion (C) nucleoprotein (D) core.

Open solution

Q80. AIPMT 2010 Prelims

Single-celled eukaryotes are included in

(A) protista (B) fungi (C) archaea (D) monera.

Open solution

Q81. AIPMT 2010 Prelims

Some hyperthermophilic organisms that grow in highly acidic (pH 2) habitats belong to the two groups

(A) eubacteria and archaea (B) cyanobacteria and diatoms
(C) protists and mosses (D) liverworts and yeasts.

Open solution

Q82. AIPMT 2010 Prelims

One of the free-living, anaerobic nitrogen-fixer is

(A) *Beijerinckia* (B) *Rhodospirillum* (C) *Rhizobium* (D) *Azotobacter.*

Open solution

Keep practising on the ExamGOAL app

Q83. AIPMT 2010 Prelims

Membrane-bound organelles are absent in

(A) *Saccharomyces* (B) *Streptococcus* (C) *Chlamydomonas* (D) *Plasmodium.*

Open solution

Q84. AIPMT 2009

Phylogenetic system of classification is based on

(A) morphological features (B) chemical constituents

(C) floral characters (D) evolutionary relationships.

Open solution

Q85. AIPMT 2009

T.O. Diener discovered a

(A) free infectious DNA (B) infectious protein

(C) bacteriophage (D) free infectious RNA.

Open solution

Q86. AIPMT 2009

Oxygenic photosynthesis occurs in

(A) *Oscillatoria* (B) *Rhodospirillium* (C) *Chlorobium* (D) *Chromatium*

Open solution

Q87. AIPMT 2009

Which of the following is a symbiotic nitrogen fixer?

(A) *Azotobacter* (B) *Frankia* (C) *Azolla* (D) *Glomus*

Open solution

Q88. AIPMT 2009

Which one is the wrong pairing for the disease and its causal organism?

(A) Black rust of wheat-*Puccinia graminis* (B) Loose smut of wheat-*Ustilago nuda*

(C) Root knot of vegetables-*Meloidogyne* sp. (D) Late blight of potato- *Alternaria solani*

Open solution

Q89. AIPMT 2008

Bacterial leaf blight of rice is caused by a species

(A) *Alternaria* (B) *Erwinia* (C) *Xanthomonas* (D) *Pseudomonas.*

Open solution

Keep practising on the ExamGOAL app
Chapter-wise PYQs with solutions, full mock tests and analysis for JEE, NEET, GATE and more.
GET IT ON Google Play

Q90. AIPMT 2008

Thermococcus, Methanococcus and *Methanobacterium* exemplify

(A) bacteria whose DNA is relaxed or positively supercoiled but which have a cytoskeleton as well as mitochondria

(B) bacteria that contain a cytoskeleton and ribosomes

(C) archaebacteria that contain protein homologous to eukaryotic core histones

(D) archaebacteria that lack any histones resembling those found in eukaryotes but whose DNA is negatively supercoiled.

Open solution

Q91. AIPMT 2008

In the light of recent classification of living organisms into three domains of life (bacteria, archaea and eukarya), which one of the following statements is true about archaea?

(A) Archaea completely differ from both prokaryotes and eukaryotes.

(B) Archaea completely differ from prokaryotes.

(C) Archaea resemble eukarya in all respects.

(D) Archaea have some novel features that are absent in other prokaryotes and eukaryotes.

Open solution

Q92. AIPMT 2007

Which one of the following is a slime mould?

(A) *Physarum* (B) *Thiobacillus* (C) *Anabaena* (D) *Rhizopus*

Open solution

Q93. AIPMT 2007

Which one of the following statements about mycoplasma is wrong?

(A) They are pleomorphic. (B) They are sensitive to penicillin.

(C) They cause diseases in plants. (D) They are also called PPLO.

Open solution

Q94. AIPMT 2007

Which pair of the following belongs to basidiomycetes?

(A) Puffballs and *Claviceps* (B) *Peziza* and stink horns

(C) Morchella and mushrooms (D) Birds nest fungi and puffballs

Open solution

Q95. AIPMT 2007

Ergot of rye is caused by a species of

(A) *Uncinula* (B) *Ustilago* (C) *Claviceps* (D) *Phytophthora*

Open solution

Q96. AIPMT 2006

Curing of tea leaves is brought about by the activity of

(A) fungi (B) bacteria (C) mycorrhiza (D) viruses.

Open solution

Q97. AIPMT 2006

Which of the following environmental conditions are essential for optimum growth of *Mucor* on a piece of bread?

A. Temperature of about 25° C
B. Temperature of about 5° C
C. Relative humidity of about 5%
D. Relative humidity of about 95%
E. A shady place
F. A brightly illuminated place

Choose the answer from the following options.

(A) B, C and F only (B) A, C and E only (C) A, D and E only (D) B, D and E only

Open solution

Q98. AIPMT 2006

The thalloid body of a slime mould (Myxomycetes) is known as

(A) protonema (B) Plasmodium (C) fruiting body (D) mycelium

Open solution

Q99. AIPMT 2005

All of the following statements concerning the actinomycetous filamentous soil bacterium *Frankia* are correct except that *Frankia*

(A) can induce root nodules on many plant species

(B) can fix nitrogen in the free-living state

(C) cannot fix specialized vesicles in which the nitrogenase is protected from oxygen by a chemical barrier involving triterpene hopanoids

(D) *like Rhizobium,* it usually infects its host plant through root hair deformation and stimulates cell proliferation in the host's cortex.

Open solution

Q100. AIPMT 2005

For retting of jute the fermenting microbe used is

(A) methanophilic bacteria (B) butyric acid bacteria

(C) *Helicobacter pylori* (D) *Streptococcus* lactis.

Open solution

Q101. AIPMT 2005

Barophilic prokaryotes

(A) grow and multiply in very deep marine sediments

(B) occur in water containing high concentrations of barium hydroxide

(C) readily grow and divide in sea water enriched in any soluble salt of barium

(D) grow slowly in highly alkaline frozen lakes at high altitudes.

Open solution

Q102. AIPMT 2005

There exists a close association between the alga and the fungus within a lichen. The fungus

(A) provides protection, anchorage and absorption for the algae

(B) provides food for the alga

(C) fixes the atmospheric nitrogen for the alga

(D) releases oxygen for the alga

Open solution

Q103. AIPMT 2004

Which of the following statements is not true for retroviruses?

(A) DNA is not present at any stage in the life cycle of retroviruses.

(B) Retroviruses carry gene for RNA-dependent DNA polymerase.

(C) The genetic material in mature retroviruses is RNA.

(D) Retroviruses are causative agents for certain kinds of cancer in man.

Open solution

Q104. AIPMT 2004

Viruses that infect bacteria multiply and cause their lysis, are called

(A) lysozymes (B) lipolytic (C) lytic (D) lysogenic.

Open solution

Q105. AIPMT 2004

Phenetic classification of organisms is based on

(A) observable characteristics of existing organisms

(B) the ancestral lineage of existing organisms

(C) dendrogram based on DNA characteristics.

(D) sexual characteristics.

Open solution

Q106. AIPMT 2004

A free living nitrogen-fixing cyanobacterium which can also form symbiotic association with the water fern *Azolla* is

(A) *Tolypothrix* (B) *Chlorella* (C) *Nostoc* (D) *Anabaena.*

Open solution

Q107. AIPMT 2004

During replication of a bacterial chromosome DNA synthesis starts from a replication origin site and

(A) RNA primers are involved
(B) is facilitated by telomerase
(C) moves in one direction of the site
(D) moves in bi-directional way.

Open solution

Q108. AIPMT 2004

Lichens are well known combination of an alga and a fungus where fungus has

(A) a saprophytic relationship with the alga
(B) an epiphytic relationship with the alga
(C) a parasitic relationship with alga
(D) a symbiotic relationship with alga.

Open solution

Q109. AIPMT 2004

A nutritionally wild type organism, which does not require any additional growth supplement is known as

(A) phenotype (B) holotype (C) auxotroph (D) prototroph

Open solution

Q110. AIPMT 2003

Phenetic classification of organisms is based on

(A) observable characteristics of existing organisms
(B) the ancestral lineage of existing organisms
(C) dendrogram based on DNA characteristics
(D) sexual characteristics.

Open solution

Q111. AIPMT 2003

Chromosomes in a bactertial cell can be 1 – 3 in number and

(A) are always circular
(B) are always linear
(C) can be either circular or linear, but never both within the same cell
(D) can be circular as well as linear within the same cell.

Open solution

Q112. AIPMT 2003

Which one of the following statements about viruses is correct?

(A) Viruses possess their own metabolic system.
(B) All viruses contain both RNA and DNA .
(C) Viruses are obligate parasites.
(D) Nucleic acid of viruses is known as capsid.

Open solution

Q113. AIPMT 2003

Tobacco mosaic virus is a tubular filament of size

(A) 300 × 10 nm (B) 300 × 5 nm (C) 300 × 20 nm (D) 700 × 30 nm

Open solution

Q114. AIPMT 2003

Viruses are no more "alive" than isolated chromosomes because

(A) They require both RNA and DNA

(B) they both need food molecules

(C) they both require oxygen for respiration

(D) both require the environment of a cell to replicate.

Open solution

Q115. AIPMT 2003

In which kingdom would you classify the archaea and nitrogen-fixing organisms, if the five-kingdom system of classification is used?

(A) Plantae (B) Fungi (C) Protista (D) Monera

Open solution

Q116. AIPMT 2002

In five kingdom system, the main basis of classification is

(A) structure of nucleus (B) mode of nutrition

(C) structure of cell wall (D) asexual reproduction.

Open solution

Q117. AIPMT 2002

Which statement is correct for bacterial transduction?

(A) Transfer of some genes from one bacteria to another bacteria through virus.

(B) Transfer of genes from one bacteria to another bacteria by conjugation.

(C) Bacteria obtained its DNA directly from mother cell.

(D) Bacteria obtained DNA from other external source.

Open solution

Q118. AIPMT 2002

The growth curve of bacterial population in lab is plotted against time. What will be the shape of graph?

(A) Sigmoid (B) Hyperbolic

(C) Ascending straight line (D) Descending straight line

Open solution

Q119. AIPMT 2002

Some bacteria are able to grow in streptomycin containing medium due to

(A) natural selection
(B) induced mutation
(C) reproductive isolation
(D) genetic drift.

Open solution

Q120. AIPMT 2002

In bacteria, plasmid is

(A) extra chromosomal material
(B) main DNA
(C) non functional DNA
(D) repetitive gene.

Open solution

Q121. AIPMT 2002

Choose the correct sequence of stages of growth curve for bacteria.

(A) Lag, log, stationary, decline phase
(B) Lag, log, decline, stationary phase
(C) Stationary, lag, log, decline phase
(D) Decline, lag, log phase, stationary

Open solution

Q122. AIPMT 2002

Which fungal disease spreads by seed and flowers?

(A) Loose smut of wheat
(B) Corn smut
(C) Covered smut of barley
(D) Soft rot of potato

Open solution

Q123. AIPMT 2002

Which of the following secretes toxins during storage conditions of crop plants?

(A) *Aspergillus*
(B) *Penicillium*
(C) *Fusarium*
(D) *Colletotrichum*

Open solution

Q124. AIPMT 2001

Cauliflower mosaic virus contains

(A) ss RNA
(B) ds RNA
(C) ds DNA
(D) ss DNA

Open solution

Q125. AIPMT 2001

What is true for cyanobacteria ?

(A) Oxygenic with nitrogenase
(B) Oxygenic without nitrogenase
(C) Non oxygenic with nitrogenase
(D) Non oxygenic without nitrogenase

Open solution

Q126. AIPMT 2001

What is true for archaebacteria?

(A) All halophiles
(B) All photosynthetics
(C) All fossils
(D) Oldest living beings

Open solution

Q127. AIPMT 2001

Difference in gram positive and gram negative bacteria is due to

(A) cell wall
(B) cell membrane
(C) ribosome
(D) cytoplasm.

Open solution

Q128. AIPMT 2001

Adhesive pad of fungi penetrates the host with the help of

(A) mechanical pressure and enzymes
(B) hooks and suckers
(C) softening by enzymes
(D) only by mechanical pressure.

Open solution

Q129. AIPMT 2000

Black rust of wheat is caused by

(A) *Puccinia*
(B) *Ustilago*
(C) *Albugo*
(D) *Phytophthora.*

Open solution

Q130. AIPMT 2000

In most fungi, the food material is stored in the form of

(A) starch
(B) glucose
(C) sucrose
(D) glycogen

Open solution

Q131. AIPMT 2000

Many scientists consider viruses as living entities because these

(A) respire
(B) can cause diseases
(C) reproduce (inside host)
(D) respond to tough environment

Open solution

Q132. AIPMT 1999

Columella is a specialised structure found in the sporangium of

(A) *Spirogyra*
(B) *Rhizopus*
(C) *Ulothrix*
(D) None of these

Open solution

Q133. AIPMT 1999

Which of the following is the use of lichens in case of pollution?

(A) Lichens are not related with pollution
(B) They act as bioindicators of pollution
(C) They treat the polluted water
(D) They promote pollution

Open solution

Q134. AIPMT 1998

In the five kingdom system of classification, which single kingdom out of the following can include blue-green algae, nitrogen fixing bacteria and methanogenic archaebacteria?

(A) Monera (B) Fungi (C) Plantae (D) Protista

Open solution

Q135. AIPMT 1998

Transfer of genetic information from one bacterium to another in the transduction process is through

(A) physical contact between donor and recipient strains
(B) conjugation between opposite strain bacterium
(C) bacteriophages released from the donor bacterial strain
(D) another bacterium having special organ for conjugation

Open solution

Q136. AIPMT 1998

A bacterium divides every 35 minutes. If a culture containing 10^5 cells per ml is grown for 175 minutes, what will be the cell concentration per ml after 175 minutes?

(A) 175×10^5 cells (B) 85×10^5 cells (C) 35×10^5 cells (D) 32×10^5 cells

Open solution

Q137. AIPMT 1998

A few organisms are known to grow and multiply at temperatures of $100-105^{\circ}C$. They belong to

(A) thermophilic subaerial fungi
(B) marine archaebacteria
(C) thermophilic sulphur bacteria
(D) hot spring blue-green algae

Open solution

Q138. AIPMT 1998

Puccinia forms

(A) uredia and pycnia on barberry leaves
(B) uredia and aecia on wheat leaves
(C) uredia and telia on wheat leaves
(D) uredia and aecia on barberry leaves

Open solution

Q139. AIPMT 1997

Viruses possess

(A) ribosomes to synthesize protein
(B) organelle for its vital mechanism
(C) either DNA or RNA
(D) none of these

Open solution

Q140. AIPMT 1997

Which of the following is free-living aerobic non-photosynthetic nitrogen-fixing bacterium?

(A) *Nostoc* (B) *Azospirillum* (C) *Rhizobium* (D) *Azotobacter*

Open solution

Q141. AIPMT 1997

Most of the lichens consist of

(A) green algae and ascomycetes
(B) brown algae and higher plant
(C) blue green algae and basidiomycetes
(D) red algae and ascomycetes

Open solution

Q142. AIPMT 1996

What is the genetic material in influenza virus?

(A) Double helical DNA
(B) RNA
(C) Single helix DNA
(D) None of these

Open solution

Q143. AIPMT 1996

BGA (blue green algae) are included in which of the following groups?

(A) Bryophytes (B) Prokaryotes (C) Protista (D) Fungi

Open solution

Q144. AIPMT 1996

Azotobacter and *Bacillus polymyxa* are the examples of

(A) pathogenic bacteria
(B) decomposers
(C) symbiotic N_2 fixer
(D) non-symbiotic N_2 fixer

Open solution

Q145. AIPMT 1996

Which one of the following statement about lichens is wrong?

(A) These grow very rapidly (2 cm per day).
(B) They show fungal and algal symbiotic relationships.
(C) Some of its species are eaten by reindeers.
(D) These are pollution indicators.

Q146. AIPMT 1996

Mycorrhiza is correctly described as

(A) parasitic association between roots and some fungi

(B) symbiotic relationship between fungi and roots of some higher plants

(C) symbiosis of algae and fungi

(D) relation of ants with the stem of some trees

Open solution

Q147. AIPMT 1995

The tailed bacteriophages are

(A) motile on surface of bacteria

(B) non-motile

(C) motile on surface of plant leaves

(D) actively motile in water

Open solution

Q148. AIPMT 1995

A large number of organic compounds can be decomposed by

(A) *Azotobacter*

(B) chemolithotrophs

(C) Mycoplasma

(D) *Pseudomonas*

Open solution

Q149. AIPMT 1995

The black rust of wheat is a fungal disease caused by

(A) *Albugo candida*

(B) *Puccinia graminis tritici*

(C) *Melampsora lini*

(D) *Claviceps purpurea*

Open solution

Q150. AIPMT 1995

The sexual reproduction is absent in

(A) *Spirogyra*

(B) *Nostoc*

(C) *Ulothrix*

(D) *Volvox*

Open solution

Q151. AIPMT 1995

Which of the following organisms possesses characteristics of a plant and an animal?

(A) *Euglena*

(B) *Paramecium*

(C) Bacteria

(D) Mycoplasma

Open solution

Q152. AIPMT 1995

The function of contractile vacuole, in protozoa, is

(A) osmoregulation

(B) reproduction

(C) locomotion

(D) digestion of food

Open solution

Q153. AIPMT 1994

Tobacco mosaic virus (*TMV*) genes are

(A) single stranded RNA
(B) double stranded DNA
(C) proteinaceous
(D) double stranded RNA

Open solution

Q154. AIPMT 1994

The protists have

(A) only free nucleic acid aggregates
(B) membrane bound nucleo proteins lying embedded in the cytoplasm
(C) gene containing nucleoproteins condensed together in loose mass
(D) nucleoprotein in direct contact with the rest of the cell substance

Open solution

Q155. AIPMT 1994

Organisms, which fix atmospheric nitrogen in the soil, fall under the category of

(A) bacteria
(B) green algae
(C) soil fungi
(D) mosses

Open solution

Q156. AIPMT 1994

Transduction in bacteria is mediated by

(A) plasmid vectors
(B) phage vectors
(C) cosmids
(D) F-factors

Open solution

Q157. AIPMT 1994

A non-photosynthetic aerobic nitrogen fixing soil bacterium is

(A) *Rhizobium*
(B) *Clostridium*
(C) *Azotobacter*
(D) *Klebsiella*

Open solution

Q158. AIPMT 1994

Mycorrhiza exhibits the phenomenon of

(A) parasitism
(B) symbiosis
(C) antagonism
(D) endemism

Q159. AIPMT 1994

Many blue-green algae occur in thermal springs (hot water springs). The temperature tolerance of these algae have been attributed to their

(A) mitochondrial structure

(B) importance of homopolar bonds in their proteins

(C) cell wall structure

(D) modern cell organization

Open solution

Q160. AIPMT 1993

Escherichia coli is used extensively in biological research as it is

(A) easily cultured

(B) easily available

(C) easy to handle

(D) easily multiplied in host

Open solution

Q161. AIPMT 1992

Bacteria lack alternation of generation because there is

(A) neither syngamy nor reduction division

(B) distinct chromosomes are absent

(C) no conjugation

(D) no exchange of genetic material

Open solution

Q162. AIPMT 1992

Organisms which are indicator of SO_2 pollution of air

(A) mosses

(B) lichens

(C) mushrooms

(D) puffballs

Open solution

Q163. AIPMT 1991

Bacteria lack alternation of generation because there is

(A) neither syngamy nor reduction division

(B) distinct chromosomes are absent

(C) no conjugation

(D) no exchange of genetic material

Open solution

Q164. AIPMT 1991

In *Amoeba* and *Paramecium* osmoregulation occurs through

(A) pseudopodia

(B) nucleus

(C) contractile vacuole

(D) general surface

Q165. AIPMT 1991

African sleeping sickness is due to

(A) *Plasmodium vivax* transmitted by tse-tse fly

(B) *Trypanosoma lewisi* transmitted by bed bug

(C) *Trypanosoma gambiense* transmitted by *Glossina palpalis*

(D) *Entamoeba gingivalis* spread by housefly

Open solution

Q166. AIPMT 1991

Name the organisms which do not derive energy directly or indirectly from sun.

(A) Chemosynthetic bacteria (B) Pathogenic bacteria

(C) Symbiotic bacteria (D) Mould

Open solution

Q167. AIPMT 1990

A non-photosynthetic aerobic nitrogen fixing soil bacterium is

(A) *Rhizobium* (B) *Clostridium* (C) *Azotobacter* (D) *Klebsiella*

Open solution

Q168. AIPMT 1990

Plasmodium, the malarial parasite, belongs to class

(A) sarcodina (B) ciliata (C) sporozoa (D) dinophyceae

Open solution

Q169. AIPMT 1990

Which is true about *Trypanosoma*?

(A) Polymorphic (B) Monogenetic

(C) Facultative parasite (D) Non-pathogenic

Open solution

Q170. AIPMT 1990

Genetic information in *Paramecium* is contained in

(A) micronucleus (B) macronucleus

(C) both micronucleus and macronucleus (D) mitochondria

Open solution

Q171. AIPMT 1990

Which one belongs to monera?

(A) *Amoeba* (B) *Escherichia* (C) *Gelidium* (D) *Spirogyra*

Q172. AIPMT 1990

Absorptive heterotrophic nutrition is exhibited by

(A) algae (B) fungi (C) bryophytes (D) pteridophytes

Open solution

Q173. AIPMT 1989

A bite of tse-tse fly may pass to humans

(A) *Leishmania donovani* (B) *Trypanosoma gambiense*

(C) *Entamoeba histolytica* (D) *Plasmodium vivax*

Open solution

Q174. AIPMT 1989

Trypanosoma belongs to class

(A) Sarcodina (B) Zooflagellata (C) Ciliata (D) Sporozoa

Open solution

Q175. AIPMT 1989

The vector for sleeping sickness is

(A) housefly (B) tse-tse fly (C) sandfly (D) fruit fly

Open solution

Q176. AIPMT 1989

The causal organism for African sleeping sickness is

(A) *Trypanosoma cruzi* (B) *T. rhodesiense*

(C) *T. tangela* (D) *T. gambiense*

Open solution

Q177. AIPMT 1989

Lichens indicate SO_2 pollution because they

(A) show association between algae and fungi (B) grow faster than others

(C) are sensitive to SO_2 (D) flourish in SO_2 rich environment

ExamGOAL
PYQ PDF

Your Exam. Our Responsibility.

From first chapter to exam day.

Practise with the questions your exam has already asked, then test yourself under real exam conditions.

PAST YEAR QUESTIONS

Every past paper, chapter-wise.

Previous year questions sorted the way you study, each with a full solution.

- Chapter-wise and year-wise
- Weightage and topic tags on every chapter
- Your progress on each one, at a glance

MOCK TESTS

Mock tests with a real exam feel.

Practise under the same pressure as the real paper, on your phone or on the big screen.

- Timed sections, just like exam day
- Mark questions for review and come back

ANALYSIS

Know your score. Know your rank.

A full report after every test, so you know exactly where you stand.

- Your percentile among everyone who took it
- Predicted real-exam percentile and All India Rank
- Subject breakdown and time analysis

PRACTICE

Solve. Check. Understand.

Learn from every question, not just the ones you get right.

- Instant answers as you practise
- Step-by-step explanations
- See how everyone else answered
