MCQ (Single Correct Answer) 74 questions

Q1. RE-NEET 2026

In water, frogs respire using ____ .

(A) trachea (B) skin (C) buccal cavity (D) lungs

Open solution

Q2. RE-NEET 2026

Sponges exchange O_2 with CO_2 by ____ .

(A) gills

(B) simple diffusion over their entire body surfaces

(C) moist cuticle

(D) tracheal tubes

Open solution

Q3. NEET 2026

In humans, respiration occurs in the following steps. Arrange these steps in the correct order.

A. Diffusion of O_2 and CO_2 between blood and tissues

B. Diffusion of O_2 and CO_2 across alveolar membrane

C. Pulmonary ventilation by which atmospheric air is drawn in and CO_2 rich alveolar air is released out

D. Cellular respiration

E. Transport of gases by the blood

Choose the correct answer from the options given below

(A) A, B, C, D, E (B) E, A, C, D, B

(C) C, B, E, A, D (D) C, A, B, E, D

Open solution

Q4. NEET 2026

Open solution

Match List-I with List-II.

List-I (Respiratory Volume)		List-II (Capacity in mL)	
A.	ERV (Expiratory Reserve Volume)	I.	$2500 - 3000\ \text{mL}$
B.	RV (Residual Volume)	II.	$500\ mL$
C.	IRV (Inspiratory Reserve Volume)	III.	$1000 - 1100\ \text{mL}$
D.	TV (Tidal Volume)	IV.	$1100 - 1200\ \text{mL}$

Choose the correct answer from the options given below :

(A) A-III, B-IV, C-I, D-II

(B) A-III, B-I, C-IV, D-II

(C) A-I, B-III, C-II, D-IV

(D) A-I, B-II, C-III, D-IV

Q5. NEET 2026

Open solution

Match List I with List II:

List I		List II	
A.	Molluscs	I.	Pulmonary respiration only
B.	Reptiles	II.	Branchial respiration
C.	Adult amphibians	III.	Cellular respiration
D.	Amoeba	IV.	Pulmonary and cutaneous respiration

Choose the correct answer from the options given below:

(A) A-II, B-I, C-IV, D-III

(B) A-I, B-II, C-IV, D-III

(C) A-II, B-I, C-III, D-IV

(D) A-III, B-II, C-I, D-IV

Q6. NEET 2025

Open solution

Frogs respire in water by skin and buccal cavity and on land by skin, buccal cavity and lungs.

Choose the correct answer from the following :

(A) The statement is false for water but true for land

(B) The statement is false for both the environments

(C) The statement is true for water but false for land

(D) The statement is true for both the environments

Keep practising on the ExamGOAL app

GET IT ON Google Play

Q7. NEET 2024 (Re-Examination)

Open solution

Match List-I with List-II:

	List - I		List - II
(A)	Residual Volume	(I)	Maximum volume of air that can be breathed in after forced expiration
(B)	Vital Capacity	(II)	Volume of air inspired or expired during normal respiration
(C)	Expiratory Capacity	(III)	Volume of air remaining in lungs after forcible expiration
(D)	Tidal Volume	(IV)	Total volume of air expired after normal inspiration

Choose the correct answer from the options given below:

(A) A-IV, B-III, C-II, D-I

(B) A-II, B-IV, C-I, D-III

(C) A-III, B-I, C-IV, D-II

(D) A-I, B-II, C-III, D-IV

Q8. NEET 2024 (Re-Examination)

Open solution

Given below are two statements: One is labelled as Assertion A and the other is labelled as Reason R.

Assertion A: During the transportation of gases, about 20-25 percent of CO_2 is carried by Haemoglobin as carbamino-haemoglobin.

Reason R: This binding is related to high pCO_2 and low pO_2 in tissues.

In the light of the above statements, choose the correct answer from the options given below.

(A) A is true but R is false.

(B) A is false but R is true.

(C) Both A and R are true and R is the correct explanation of A.

(D) Both A and R are true but R is NOT the correct explanation of A

Q9. NEET 2024

Open solution

Match List I with List II:

	List - I		List - II
A.	Expiratory capacity	I.	Expiratory reserve volume + Tidal volume + Inspiratory reserve volume
B.	Functional residual capacity	II.	Tidal volume + Expiratory reserve volume
C.	Vital capacity	III.	Tidal volume + Inspiratory reserve volume
D.	Inspiratory capacity	IV.	Expiratory reserve volume + Residual volume

Choose the correct answer from the options given below :

(A) A-II, B-IV, C-I, D-III

(B) A-III, B-II, C-IV, D-I

(C) A-II, B-I, C-IV, D-III

(D) A-I, B-III, C-II, D-IV

Q10. NEET 2024

Which of the following factors are favourable for the formation of oxyhaemoglobin in alveoli?

(A) High pO_2 and High pCO_2

(B) High pO_2 and Lesser H^+ concentration

(C) Low pCO_2 and High H^+ concentration

(D) Low pCO_2 and High temperature

Open solution

Q11. NEET 2023 Manipur

Select the sequence of steps in Respiration.

(A) Diffusion of gases (O_2 and CO_2) across alveolar membrane.

(B) Diffusion of O_2 and CO_2 between blood and tissues.

(C) Transport of gases by the blood

(D) Pulmonary ventilation by which atmospheric air is drawn in and CO_2 rich alveolar air is released out.

(E) Utilisation of O_2 by the cells for catabolic reactions and resultant release of CO_2

Choose the correct answer from the options given below :

(A) (D), (A), (C), (B), (E)

(B) (C), (B), (A), (E), (D)

(C) (B), (C), (E), (D), (A)

(D) (A), (C), (B), (E), (D)

Open solution

Q12. NEET 2023 Manipur

Given below are two statements : one is labelled as Assertion (A) and the other is labelled as Reason (R).

Assertion (A) : A person goes to high altitude and experiences **"Altitude Sickness"** with symptoms like breathing difficulty and heart palpitations.

Reason (R) : Due to low atmospheric pressure at high altitude, the body does not get sufficient oxygen.

In the light of the above statements, choose the correct answer from the options given below :

(A) (A) is true but (R) is false

(B) (A) is false but (R) is true

(C) Both (A) and (R) are true and (R) is the correct explanation of (A).

(D) Both (A) and (R) are true but (R) is not the correct explanation of (A).

Open solution

Q13. NEET 2023

Vital capacity of lung is _____.

(A) IRV + ERV + TV + RV

(B) IRV + ERV + TV − RV

(C) IRV + ERV + TV

(D) IRV + ERV

Open solution

GET IT ON Google Play

Q14. NEET 2022 Phase 2

Identify the region of human brain which has pneumotaxic centre that alters respiratory rate by reducing the duration of inspiration.

(A) Cerebrum (B) Medulla (C) Pons (D) Thalamus

Open solution

Q15. NEET 2022 Phase 2

Which of the following statements are correct with respect to vital capacity?

(a) It includes ERV, TV and IRV

(b) Total volume of air a person can inspire after a normal expiration.

(c) The maximum volume of air a person can breathe in after forced expiration.

(d) It includes ERV, RV and IRV.

(e) The maximum volume of air a person can breathe out after a forced inspiration.

Choose the most appropriate answer from the options given below :

(A) (a) and (e) (B) (b), (d) and (e) (C) (a), (c) and (d) (D) (a), (c) and (e)

Open solution

Q16. NEET 2022 Phase 1

Under normal physiological conditions in human being every 100 ml of oxygenated blood can deliver _____ ml of O_2 to the tissues.

(A) 2 ml (B) 5 ml (C) 4 ml (D) 10 ml

Open solution

Q17. NEET 2022 Phase 1

Which of the following is not the function of conducting part of respiratory system?

(A) It clears inhaled air from foreign particles

(B) Inhaled air is humidified

(C) Temperature of inhaled air is brought to body temperature

(D) Provides surface for diffusion of O_2 and CO_2

Open solution

Q18. NEET 2021

Select the favourable conditions required for the formation of oxyhaemoglobin at the alveoli.

(A) Low pO_2, low pCO_2, more H^+, higher temperature

(B) High pO_2, low pCO_2, less H^+, lower temperature

(C) Low pO_2, high pCO_2, more H^+, higher temperature

(D) High pO_2, high pCO_2, less H^+, higher temperature.

Open solution

GET IT ON Google Play

Q19. NEET 2021

The partial pressures (in mm Hg) of oxygen (O_2) and carbon dioxide (CO_2) at alveoli (the site of diffusion) are :

(A) pO_2 = 159 and pCO_2 = 0.3

(B) pO_2 = 104 and pCO_2 = 40

(C) pO_2 = 40 and pCO_2 = 45

(D) pO_2 = 95 and pCO_2 = 40

Open solution

Q20. NEET 2021

Assertion (A) : A person goes to high altitude and experiences 'altitude sickness' with symptoms like breathing difficulty and heart palpitations.

Reason (R) : Due to low atmospheric pressure at high altitude, the body does not get sufficient oxygen.

In the light of the above statements, choose the correct answer from the options given below

(A) (A) is false but (R) is true

(B) Both (A) and (R) are true and (R) is the correct explanation of (A)

(C) Both (A) and (R) are true but (R) is not the correct explanation of (A)

(D) (A) is true but (R) is false

Open solution

Q21. NEET 2020 Phase 2

The Total Lung Capacity (TLC) is the total volume of air accommodated in the lungs at the end of a forced inspiration. This includes :

(A) RV (Residual Volume); ERV (Expiratory Reserve Volume); TV (Tidal Volume); and IRV (Inspiratory Reserve Volume)

(B) RV; IC (Inspiratory Capacity); EC (Expiratory Capacity); and ERV

(C) RV; ERV; IC and EC

(D) RV; ERV; VC (Vital Capacity) and FRC (Functional Residual Capacity)

Open solution

Keep practising on the ExamGOAL app
Chapter-wise PYQs with solutions, full mock tests and analysis for JEE, NEET, GATE and more.
GET IT ON Google Play

Q22. NEET 2020 Phase 2

Open solution

Match the following columns and select the correct option :

Column - I	Column - II
(a) Pneumotaxic Centre	(i) Alveoli
(b) O_2 Dissociation curve	(ii) Pons region of brain
(c) Carbonic Anhydrase	(iii) Haemoglobin
(d) Primary site of exchange of gases	(iv) R.B.C.

(A) (a)-(iv), (b)-(i), (c)-(iii), (d)-(ii)
(B) (a)-(i), (b)-(iii), (c)-(ii), (d)-(iv)
(C) (a)-(ii), (b)-(iii), (c)-(iv), (d)-(i)
(D) (a)-(iii), (b)-(ii), (c)-(iv), (d)-(i)

Q23. NEET 2020 Phase 1

Open solution

Select the correct events that occur during inspiration.
(i) Contraction of diaphragm
(ii) Contraction of external inter-costal muscles
(iii) Pulmonary volume decreases
(iv) Intra pulmonary pressure increases

(A) Only (iv)
(B) (iii) and (iv)
(C) (i), (ii) and (iv)
(D) (i) and (ii)

Q24. NEET 2020 Phase 1

Open solution

Identify the wrong statement with reference to transport of oxygen.

(A) Binding of oxygen with haemoglobin is mainly related to partial pressure of O_2
(B) Partial pressure of CO_2 can interfere with O_2 binding with haemoglobin
(C) Higher H^+ conc. in alveoli favours the formation of oxyhaemoglobin
(D) Low pCO_2 in alveoli favours the formation of oxyhaemoglobin

Q25. NEET 2019 (Odisha)

Open solution

Select the correct statement.

(A) Expiration is initiated due to contraction of diaphragm.
(B) Expiration occurs due to external intercostal muscles.
(C) Intrapulmonary pressure is lower than the atmospheric pressure during inspiration.
(D) Inspiration occurs when atmospheric pressure is less than intrapulmonary pressure.

Q26. NEET 2019 (Odisha)

The maximum volume of air a person can breathe in after a forced expiration is known as:

(A) Total Lung Capacity
(B) Expiratory Capacity
(C) Vital Capacity
(D) Inspiratory Capacity

Open solution

Q27. NEET 2019

Tidal Volume and Expiratory Reserve Volume of an athlete is 500 mL and 1000 mL respectively. What will be his Expiratory Capacity if the Residual Volume is 1200 mL?

(A) 2200 mL
(B) 2700 mL
(C) 1500 mL
(D) 1700 mL

Open solution

Q28. NEET 2018

Which of the following options correctly represents the lung conditions in asthma and emphysema, respectively?

(A) Decreased respiratory surface; Inflammation of bronchioles
(B) Inflammation of bronchioles; Decreased respiratory surface
(C) Increased number of bronchioles; Increased respiratory surface
(D) Increased respiratory surface; Inflammation of bronchioles

Open solution

Q29. NEET 2018

Match the items given in column I with those in column II and select the correct option given below.

Column I	Column II
A. Tidal volume	(i) 2500 – 3000 mL
B. Inspiratory reserve volume	(ii) 1100 – 1200 mL
C. Expiratory reserve volume	(iii) 500 – 550 mL
D. Residual volume	(iv) 1000 – 1100 mL

(A) A → (iii), B → (i), C → (iv), D → (ii)
(B) A → (iv), B → (iii), C → (ii), D → (i)
(C) A → (iii), B → (ii), C → (i), D → (iv)
(D) A → (i), B → (iv), C → (ii), D → (iii)

Open solution

Q30. NEET 2018

Which of the following is an occupational respiratory disorder?

(A) Botulism
(B) Anthracis
(C) Silicosis
(D) Emphysema

Open solution

Q31. NEET 2017

Lungs are made up of air-filled sacs, the alveoli. They do not collapse even after forceful expiration, because of

(A) inspiratory reserve volume
(B) tidal volume
(C) expiratory reserve volume
(D) residual volume.

Open solution

Q32. NEET 2016 Phase 2

The partial pressure of oxygen in the alveoli of the lungs is

(A) equal to that in the blood
(B) more than that in the blood
(C) less than that in the blood
(D) less than that of carbon dioxide.

Open solution

Q33. NEET 2016 Phase 2

Lungs do not collapse between breaths and some air always remains in the lungs which can never be expelled because

(A) there is a negative pressure in the lungs
(B) there is a negative intrapleural pressure pulling at the lung walls
(C) there is a positive intrapleural pressure
(D) pressure in the lungs is higher than the atmospheric pressure.

Open solution

Q34. NEET 2016 Phase 1

Reduction in pH of blood will

(A) decrease the affinity of haemoglobin with oxygen
(B) release bicarbonate ions by the liver
(C) reduce the rate of heart beat
(D) reduce the blood supply to the brain.

Open solution

Q35. NEET 2016 Phase 1

Name the chronic respiratory disorder caused mainly by cigarette smoking.

(A) Respiratory acidosis
(B) Respiratory alkalosis
(C) Emphysema
(D) Asthma

Open solution

GET IT ON Google Play

Q36. NEET 2016 Phase 1

Asthma may be attributed to

(A) inflammation of the trachea

(B) accumulation of fluid in the lungs

(C) bacterial infection of the lungs

(D) allergic reaction of the mast cells in the lungs.

Open solution

Q37. AIPMT 2015

Name the pulmonary disease in which alveolar surface area involved in gas exchage is drastically reduced due to damage in the alveolar walls.

(A) Pneumonia (B) Asthma (C) Pleurisy (D) Emphysema

Open solution

Q38. AIPMT 2015 Cancelled Paper

When you hold your breath, which of the following gas changes in blood would first lead to the urge to breathe?

(A) Falling CO_2 concentration

(B) Rising CO_2 and falling O_2 concentration

(C) Falling O_2 concentration

(D) Rising CO_2 concentration

Open solution

Q39. AIPMT 2014

Approximately seventy percent of carbon-dioxide absorbed by the blood will be transported to the lungs

(A) as bicarbonate ions

(B) in the from of dissolved gas molecules

(C) by binding to R.B.C.

(D) as carbamino - haemoglobin.

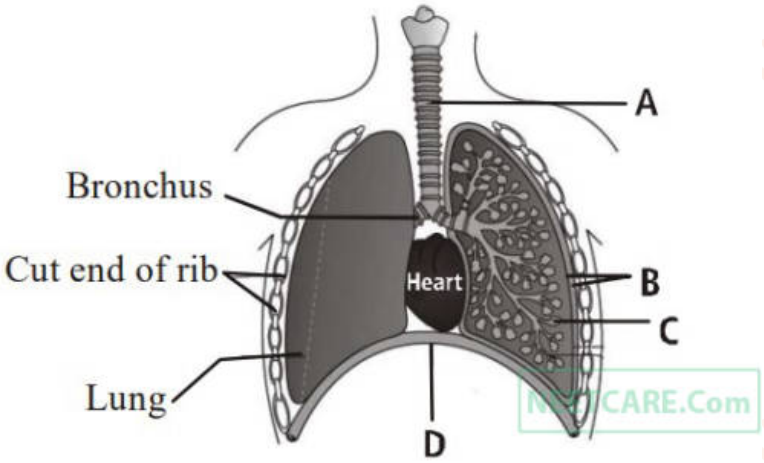

Open solution

Q40. NEET 2013

The figure shows a diagrammatic view of human respiratory system with labels A, B, C and D. Select the option which gives correct identification and main function and / or characteristic.

Open solution

(A) A - Trachea - Long tube supported by complete cartilaginous rings for conducting inspired air.

(B) C - Alveoli - Thin walled vascular bag like structures for exchange of gases.

(C) B - Pleural membrane - Surround ribs on both sides to provide cushion against rubbing.

(D) D - Lower end of lungs - Diaphragm pulls it down during inspiration.

Q41. AIPMT 2012 Prelims

Which one of the following is the correct statement for respiration in humans?

Open solution

(A) Cigarette smoking may lead to inflammation of bronchi.

(B) Neural signals from pneumotoxic centre in pons region of brain can increase the duration of inspiration.

(C) Workers in grinding and stone-breaking industries may suffer, from lung fibrosis.

(D) About 90% of carbon dioxide (CO_2) is carried by haemoglobin as carbamino-haemoglobin.

Q42. AIPMT 2012 Prelims

People who have migrated from the plains to an area adjoining Rohtang Pass about six months back

Open solution

(A) have more RBCs and their haemoglobin has a lower binding affinity to O_2

(B) are not physically fit to play games like football

(C) suffer from altitude sickness with symptoms like nausea, fatigue, etc.

(D) have the usual RBC count but their haemoglobin has very high binding affinity to O_2.

Q43. AIPMT 2011 Mains

Which one of the following is a possibility for most of us in regard to breathing, by making a conscious effort?

Open solution

(A) One can breathe out air totally without oxygen.

(B) One can breathe out air through Eustachian tube by closing both nose and mouth.

(C) One can consciously breathe in and breathe out by moving the diaphragm alone, without moving the ribs at all.

(D) The lungs can be made fully empty by forcefully breathing out all air from them.

Q44. AIPMT 2011 Mains

Bulk of carbon dioxide (CO_2) released from body tissues into the blood is present as

Open solution

(A) bicarbonate in blood plasma and RBCs

(B) free CO_2 in blood plasma

(C) 70% carbamino-haemoglobin and 30% as bicarbonate

(D) carbamino-haemoglobin in RBCs.

Q45. AIPMT 2011 Prelims

A large proportion of oxygen remains unused in the human blood even after its uptake by the body tissues. This O_2

Open solution

(A) acts as a reserve during muscular exercise

(B) raises the pCO_2 of blood to 75 mm of Hg.

(C) is enough to keep oxyhaemoglobin saturation at 96%

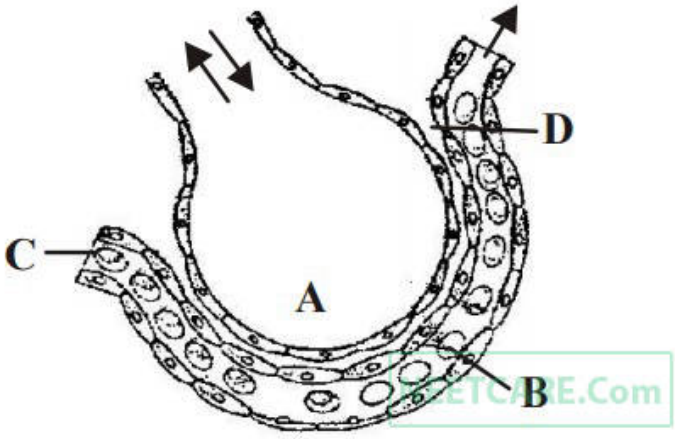

(D) helps in releasing more O_2 to the epithelial tissues.

Keep practising on the ExamGOAL app
Chapter-wise PYQs with solutions, full mock tests and analysis for JEE, NEET, GATE and more.
GET IT ON Google Play

Q46. AIPMT 2011 Prelims

Open solution

The figure given below shows a small part of human lung where exchange of gases takes place. Select the option which represents labelled part (A, B, C or D) correctly identified along with its function.

(A) D : capillary wall - exchange of O_2 and CO_2 takes place here

(B) B : red blood cells - transport of CO_2 mainly.

(C) A : alveolar cavity - main site of exchange of respiratory gases

(D) C : arterial capillary - passes oxygen to tissues

Q47. AIPMT 2010 Prelims

Open solution

Listed below are four respiratory capacities (i – iv) and four jumbled respiratory volumes of a normal human adult.

	Respiratory capacities		Respiratory volumes
(i)	Residual volume		2500 mL
(ii)	Vital capacity		3500 mL
(iii)	Inspiratory reserve volume		1200 mL
(iv)	Inspiratory capacity		4500 mL

Which one of the following is the correct matching of two capacities and volumes?

(A) (ii) 2500 mL, (iii) 4500 mL

(B) (iii) 1200 mL, (iv) 2500 mL

(C) (iv) 3500 mL, (i) 1200 mL

(D) (i) 4500 mL, (ii) 3500 mL

Keep practising on the ExamGOAL app

Q48. AIPMT 2010 Prelims

What is true about RBCs in humans?

(A) They carry about 20-25 percent of CO_2.

(B) They transport 99.5 percent of O_2.

(C) They transport about 80 percent oxygen only and the rest 20 percent of it is transported in dissolved state in blood plasma

(D) They do not carry CO_2 at all.

Open solution

Q49. AIPMT 2008

What is vital capacity of our lungs?

(A) Inspiratory reserve volume *plus* expiratory reserve volume

(B) Total lung capacity *minus* residual volume

(C) Inspiratory reserve volume *plus* tidal volume

(D) Total lung capacity *minus* expiratory reserve volume

Open solution

Q50. AIPMT 2008

The haemoglobin of a human foetus

(A) has only 2 protein subunits instead of 4

(B) has a higher affinity for oxygen than that of an adult

(C) has a lower affinity for oxygen than that of the adult

(D) its affinity for oxygen is the same as that of an adult.

Open solution

Q51. AIPMT 2006

The majority of carbon dioxide produced by our body cells is transported to the lungs as

(A) attached to haemoglobin

(B) dissolved in the blood

(C) as bicarbonates

(D) as carbonates.

Open solution

Q52. AIPMT 2006

Which one of the following statements is incorrect?

(A) The principle of countercurrent flow facilitates efficient respiration in gills of fishes.

(B) The residual air in lungs slightly decreases the efficiency of respiration in mammals.

(C) The presence of non-respiratory air sacs, increases the efficiency of respiration in birds.

(D) In insects, circulating body fluids serve to distribute oxygen to tissues.

Open solution

Q53. AIPMT 2006

People living at sea level have around 5 million RBC per cubic millimeter of their blood whereas those living at altitude to 5400 metres have around 8 million. This is because at high altitude

(A) people eat more nutritive food, therefore more RBCs are formed

(B) people get pollution-free air to breath and more oxygen is available

(C) atmospheric O_2 level is less and hence more RBCs are needed to absorb the required amount of O_2 to survive

(D) there is more UV radiation which enhances RBC production.

Open solution

Q54. AIPMT 2004

Blood analysis of a patient reveals an unusually high quantity of carboxyhaemoglobin content. Which of the following conclusions is most likely to be correct?
The patient has been inhaling polluted air containing unusually high content of

(A) carbon disulphide

(B) chloroform

(C) carbon dioxide

(D) carbon monoxide.

Open solution

Q55. AIPMT 2004

When CO_2 concentration in blood increases breathing becomes

(A) shallower and slow

(B) there is no effect on breathing

(C) slow and deep

(D) faster and deeper

Open solution

Q56. AIPMT 1999

Haemoglobin is a type of

(A) carbohydrate

(B) vitamin

(C) skin pigment

(D) respiratory pigment

Open solution

Q57. AIPMT 1999

The respiratory centres which control inspiration and expiration are located in :

(A) spinal cord

(B) diencephalon

(C) cerebellum

(D) medulla oblongata

Open solution

Q58. AIPMT 1999

Which of the following is pollution related disorder?

(A) Fluorosis

(B) Leprosy

(C) Pneumonicosis

(D) Silicosis

Open solution

Keep practising on the ExamGOAL app
Chapter-wise PYQs with solutions, full mock tests and analysis for JEE, NEET, GATE and more.
GET IT ON Google Play

Q59. AIPMT 1998

The exchange of gases in the alveoli of the lungs takes place by

(A) osmosis
(B) simple diffusion
(C) passive transport
(D) active transport

Open solution

Q60. AIPMT 1997

The CO_2 content by volume, in the atmospheric air is about

(A) 3.34%
(B) 4%
(C) 0.0314%
(D) 0.34%

Open solution

Q61. AIPMT 1997

In lungs, the air is separated from the venous blood through

(A) transitional epithelium + tunica externa of blood vessel
(B) squamous epithelium + endothelium of blood vessel
(C) squamous epithelium + tunica media of blood vessel
(D) none of the above

Open solution

Q62. AIPMT 1996

How the transport of O_2 and CO_2 by blood happens?

(A) With the help of WBCs and blood serum
(B) With the help of platelets and corpuscles
(C) With the help of RBCs and blood plasma
(D) With the help of RBCs and WBCs

Open solution

Q63. AIPMT 1996

When 1500 mL air is in the lungs, it is called

(A) residual volume
(B) inspiratory reserve volume
(C) vital capacity
(D) tidal volume

Open solution

Q64. AIPMT 1996

Lungs are enclosed in

(A) periosteum
(B) perichondrium
(C) pericardium
(D) pleural membrane

Open solution

Keep practising on the ExamGOAL app
Chapter-wise PYQs with solutions, full mock tests and analysis for JEE, NEET, GATE and more.

Q65. AIPMT 1995

At high altitude, the RBCs in the human blood will

(A) increase in number
(B) decrease in number
(C) increase in size
(D) decrease in size

Open solution

Q66. AIPMT 1995

Although much CO_2 is carried in blood, yet blood does not become acidic, because

(A) CO_2 is continuously diffused through the tissues and is not allowed to accumulate
(B) in CO_2 transport, blood buffers play an important role
(C) CO_2 is absorbed by the leucocytes
(D) CO_2 combines with water to form H_2CO_3 which is neutralized by $NaCO_3$

Open solution

Q67. AIPMT 1995

The carbon dioxide is transported *via* blood to lungs mostly

(A) in combination with haemoglobin only
(B) dissolved in blood plasma
(C) in the form of bicarbonate ions
(D) as carbaminohaemoglobin and as carbonic acid

Open solution

Q68. AIPMT 1995

The ventilation movements of the lungs in mammals are governed by

(A) muscular walls of lung
(B) diaphragm
(C) intercostal muscles
(D) both (b) and (c)

Open solution

Q69. AIPMT 1994

In man and mammals, air passes from outside into the lungs through

(A) nasal cavity, larynx, pharynx, trachea, bronchi, alveoli
(B) nasal cavity, larynx, pharynx, trachea, bronchioles, alveoli
(C) nasal cavity, pharynx, larynx, trachea, bronchioles, bronchi, alveoli
(D) nasal cavity, pharynx, larynx, trachea, bronchi, bronchioles, alveoli

Open solution

Q70. AIPMT 1994

The respiratory centre which regulates respiration is located in

(A) cerebellum
(B) medulla oblongata
(C) cerebral peduncle
(D) the vagus nerve

Q71. AIPMT 1993

Carbon dioxide is transported from tissues to respiratory surface by only

(A) plasma and erythrocytes
(B) plasma
(C) erythrocytes
(D) erythrocytes and leucocytes

Open solution

Q72. AIPMT 1991

Carbonic anhydrase occurs in

(A) lymphocytes
(B) blood plasma
(C) RBC
(D) leucocytes

Open solution

Q73. AIPMT 1990

The alveolar epithelium in the lung is

(A) nonciliated columnar
(B) nonciliated squamous
(C) ciliated columnar
(D) ciliated squamous

Open solution

Q74. AIPMT 1990

Skin is an accessory organ of respiration in

(A) humans
(B) frog
(C) rabbit
(D) lizard

ExamGOAL
PYQ PDF

Your Exam. Our Responsibility.

From first chapter to exam day.

Practise with the questions your exam has already asked, then test yourself under real exam conditions.

PAST YEAR QUESTIONS

Every past paper, chapter-wise.

Previous year questions sorted the way you study, each with a full solution.

- Chapter-wise and year-wise
- Weightage and topic tags on every chapter
- Your progress on each one, at a glance

MOCK TESTS

Mock tests with a real exam feel.

Practise under the same pressure as the real paper, on your phone or on the big screen.

- Timed sections, just like exam day
- Mark questions for review and come back

ANALYSIS

Know your score. Know your rank.

A full report after every test, so you know exactly where you stand.

- Your percentile among everyone who took it
- Predicted real-exam percentile and All India Rank
- Subject breakdown and time analysis

PRACTICE

Solve. Check. Understand.

Learn from every question, not just the ones you get right.

- Instant answers as you practise
- Step-by-step explanations
- See how everyone else answered

NCERT Exemplar
With full solutions
